

Smart PMB Test Report

Run date 27 Jul 2026
Environment local dev, Chrome headless
Harness Selenium 4.46 / Python

16 PASSED	0 FAILED	4 SUITES	3 ROLES COVERED
--------------	-------------	-------------	--------------------

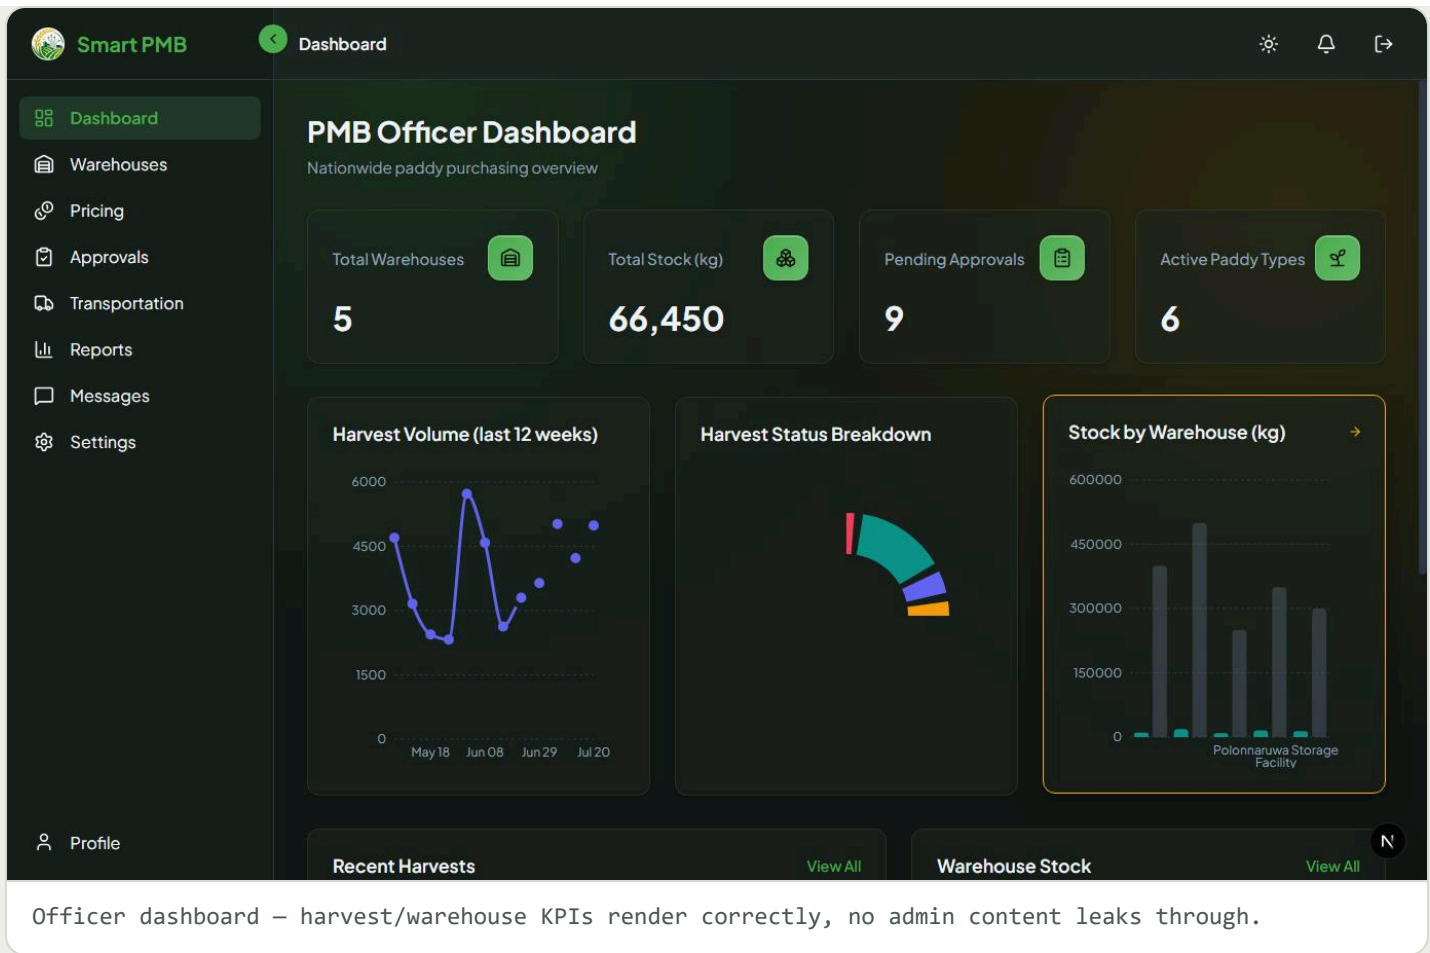

Covers the role-based access control and dashboard-routing work from this session: permission-gated sidebars, the Preview Portal's live toggle switches, the Maintenance Errors tab, and login/logout through the shared Header — exercised against the real running app in a headless browser, not mocked.

Suite A

PMB Officer Portal

Logged in as a throwaway officer account holding manage_users but not view_admin_dashboard.

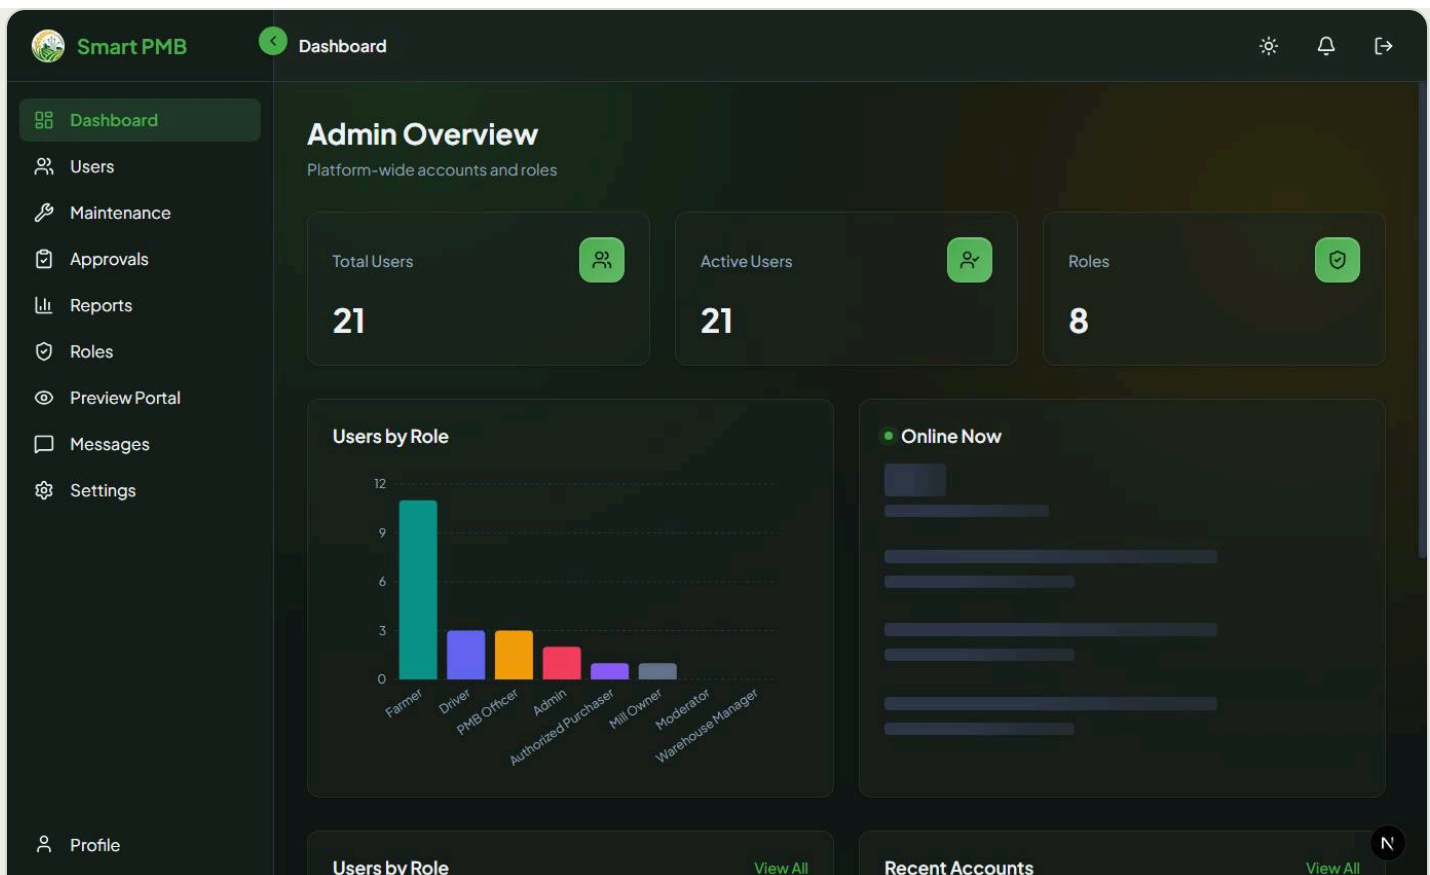

TC-01	Login redirects away from /login	PASS
TC-02	Lands on the Officer dashboard panel (harvest & warehouse KPIs), not the Admin overview	PASS
TC-03	Dashboard does <i>not</i> show the admin-only "Total Users" KPI	PASS
TC-04	Sidebar shows Warehouses / Pricing / Approvals — permissions the role actually holds	PASS
TC-05	Sidebar hides Roles / Preview Portal — role lacks manage_roles	PASS
TC-06	Log out via the header redirects to /login	PASS

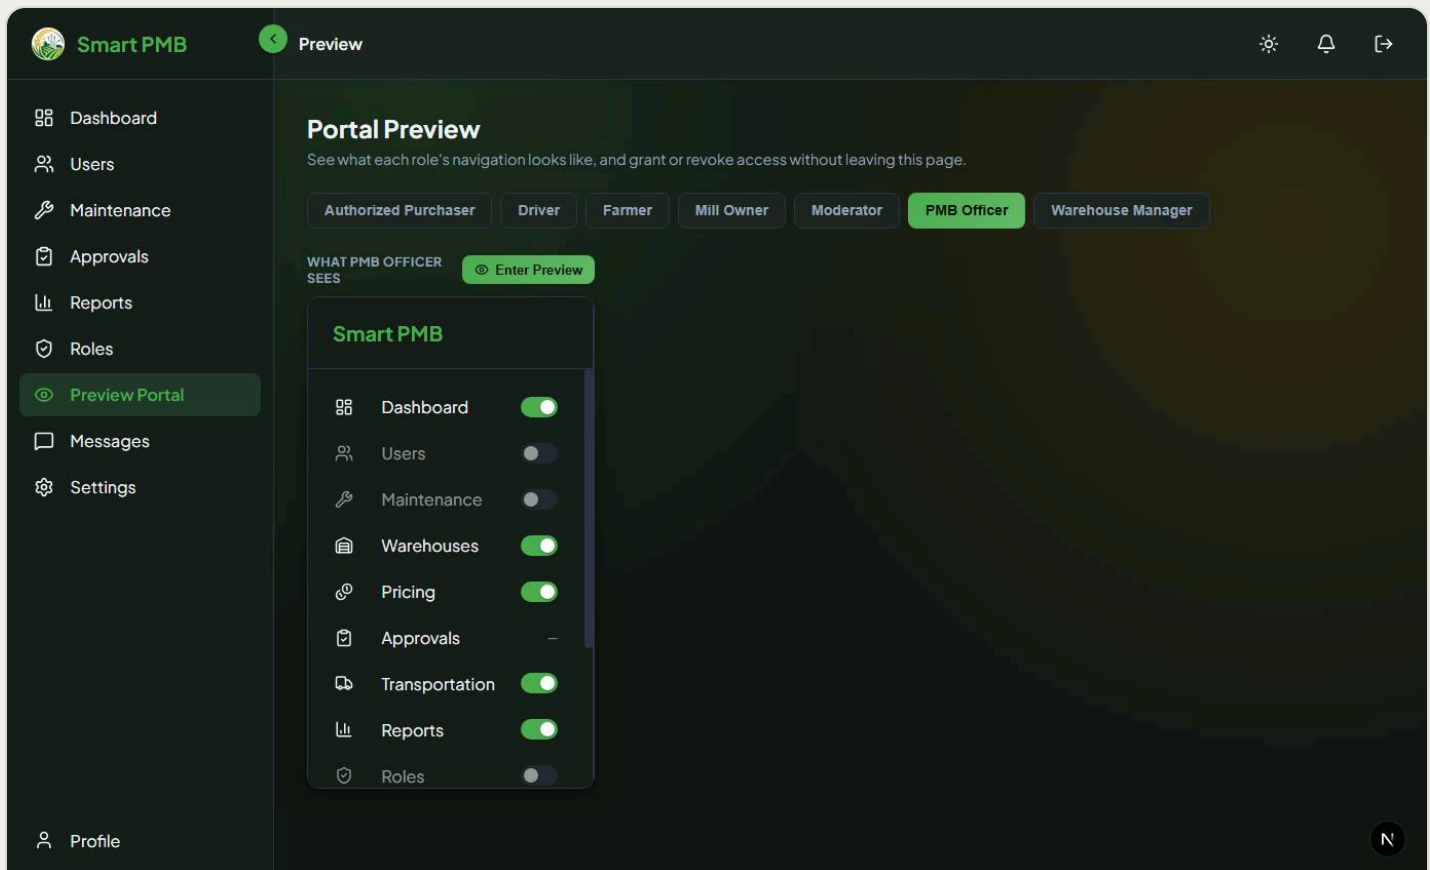

Suite B Admin Portal & Preview Portal

Logged in as a throwaway admin account, then used the Preview Portal's quick-toggle checklist.

TC-07	Login redirects away from /login	PASS
TC-08	Lands on the Admin Overview panel	PASS
TC-09	Preview Portal has a "PMB Officer" role tab	PASS
TC-10	Preview Portal mockup renders switch inputs (12 found)	PASS
TC-11	A "Users" toggle row exists in the mockup	PASS
TC-12	Clicking the Users switch actually persists to the database (before=False → after=True , verified via a full page reload, then reverted)	PASS

Admin Overview panel – the counterpart view an officer never sees.

Preview Portal – PMB Officer mockup. Green switches are granted permissions, grey are revoked, and Approvals shows a plain “–” since it's gated by either of two permissions rather than one.

TC-13 Maintenance page has an "Errors" tab and it renders on click

PASS

The screenshot shows the 'Smart PMB' Maintenance Console. The left sidebar contains navigation links: Dashboard, Users, Maintenance (highlighted), Approvals, Reports, Roles, Preview Portal, Messages, Settings, and Profile. The main content area is titled 'System Maintenance' with a subtitle 'Audit trail, login activity, alerts, backups, and system settings.' Below this are tabs for Alerts, Audit Log, Login Activity, Errors (highlighted), Backups, and Settings. The 'Errors' tab displays a table of system errors.

ACTOR	METHOD	PATH	EXCEPTION	MESSAGE	STATUS	WHEN
Anonymous	POST	/api/auth/refresh/	InvalidToken	{'detail': ErrorDetail(string='Token is blacklisted', code='token_not_valid'), 'code': ErrorDetail(string='token_not_valid', code='token_not_valid')}	401	Jul 27, 2026 12:2

Maintenance → Errors tab, populated by the exception-logging work from earlier this session.

TC-14 Login redirects away from /login

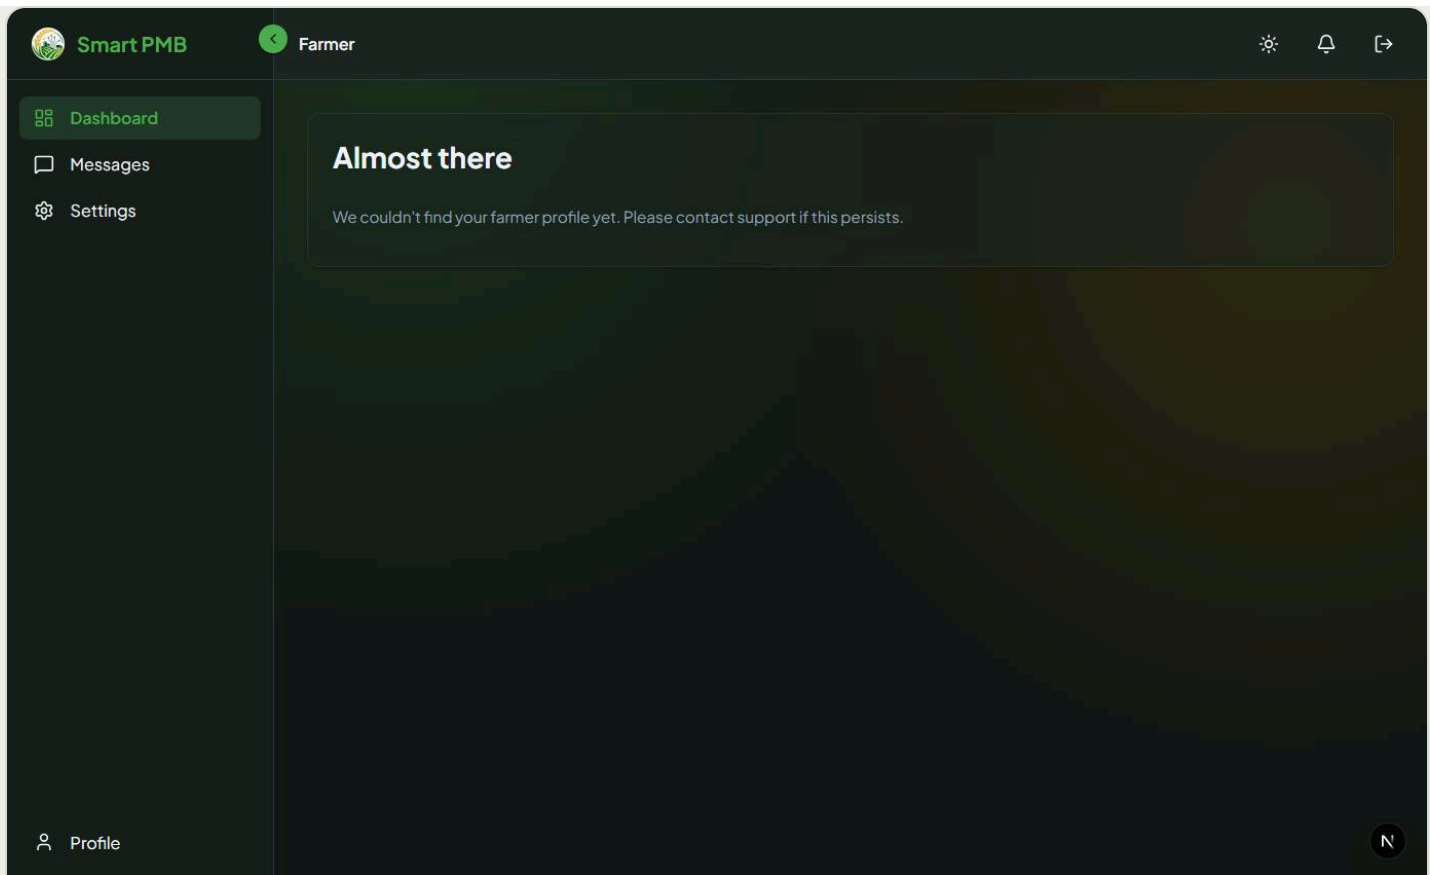

PASS

TC-15 Sidebar has no "Log out" item — removed earlier this session

PASS

TC-16 Header's Log out button is still present and functional

PASS

Farmer portal – sidebar ends at Settings; logout lives only in the header now.

METHOD NOTE

Two false alarms, caught and fixed before this report

The first draft of this suite reported 2 failures. Neither was an application bug:

Wait time. The admin login check timed out at 15s. The actual request completed server-side in ~9–20s (Turbopack's first-compile cost plus a remote-DB round trip, both already known costs on this project) — the test just wasn't patient enough. Fixed by polling for up to 30s instead of a fixed wait.

Wrong marker text. The officer-dashboard check looked for the literal string “Officer Dashboard”, which the panel never actually renders as a heading. Fixed by checking for real panel content (“Recent Harvests”, “Stock by Warehouse”) instead.

All throwaway accounts (`_selenium_admin`, `_selenium_officer`, `_selenium_farmer`) and the one permission change made during testing were deleted / reverted after the run.
